

Sandpaw Veterinary Clinic PetCare

Customer screen, back office and DevAny dashboard

Appointments and vaccination tracking for vets: owners book visits with real slot capacity and follow their pet's day through photo updates, while the clinic runs its calendar, patients and reminders from one dashboard.

demo-petcare.devany.app

What was built?

Veterinary clinic · Al Wasl, Dubai. One DevAny app with two faces: the screen on the customer's phone and the business's back office.

Highlights

- Online booking with per-vet slot capacity, full slots and a check-in QR
- Live photo status updates from the clinic to the owner's phone
- Vaccination records, due and overdue tracking and reminder automation (demo)
- Day calendar per vet, patient records, KPIs and an AI photo pre-assessment (demo)

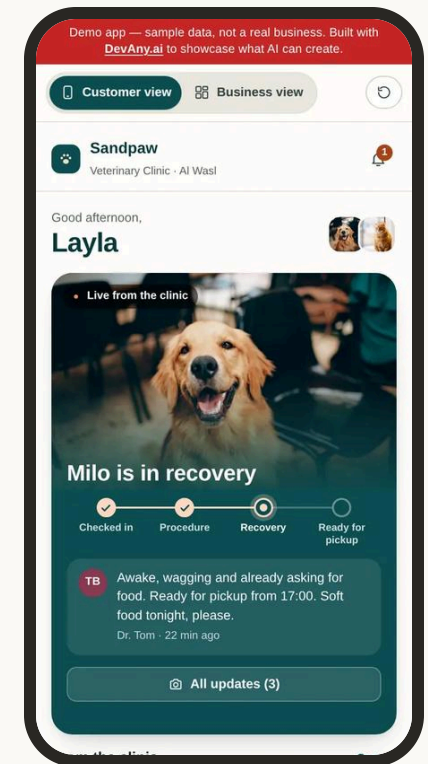

The demo and your copy

- The demo runs entirely in the browser: sample data is generated on the page, nothing is saved, and no AI or email is called.
- Your copy is a real DevAny app: records are stored and the back office opens with a staff sign-in.
- Customers use it from a link or QR code, with no account.

What the customer sees

Customers open the app from a link or QR code; no install or account needed.

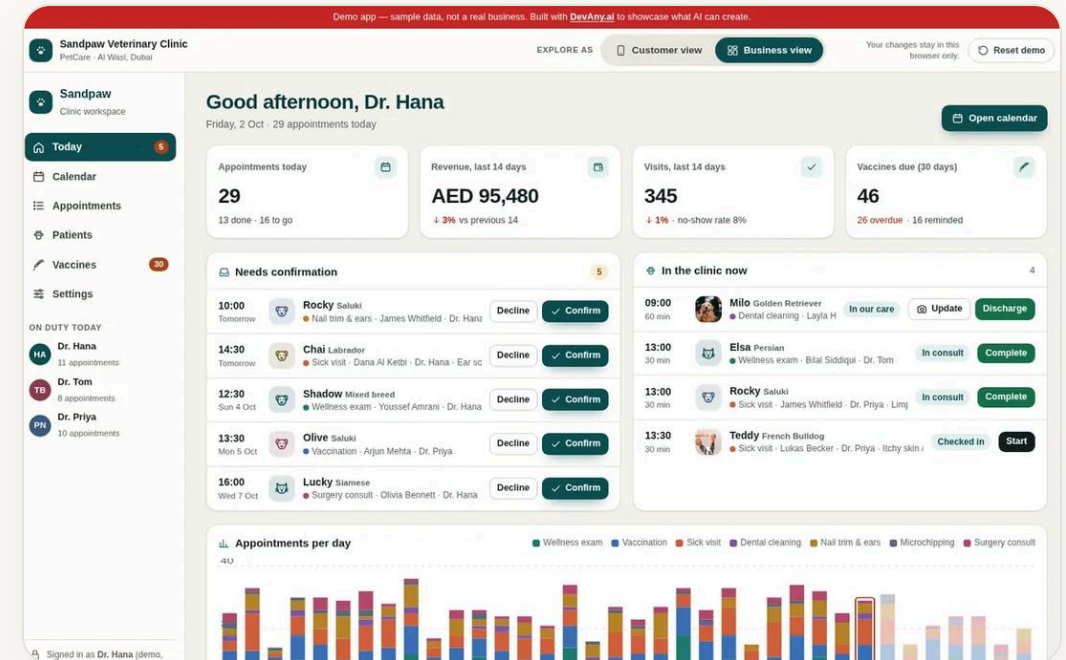

- Live care card: Milo's dental day with photo updates from the vet
- Book in 4 steps: pet & service, vet & slot, details, review
- Slots show vets free, Last spot or Full; dental is morning-only
- Add a photo to get an AI preliminary note (demo, not a diagnosis)
- Vaccination records with due/overdue pills, plus a check-in QR

What the business manages

The business view inside the app is where the owner and team work day to day.

- Today: KPIs, Needs confirmation and the in-clinic patient flow
- Send owners photo updates using stage templates
- Day calendar with a column per vet, lunch blocks and a now-line
- 80 pets, 60 owners, vaccine coverage and reminders (demo)
- Choose which vets take online bookings; slot capacity updates live

TRY IT IN THE LIVE DEMO

See both screens work together

In the demo, the switch in the top bar moves between the customer and business views.

Try this

1. In Customer view, book a visit for Luna and send the request
2. Switch to Business view: it's under Needs confirmation; Confirm it
3. Switch back: Visits shows Confirmed and a note arrives in the inbox

Demo address

`demo-petcare.devany.app`

What you try in the demo is not saved; it resets when the page reloads.

Map of the DevAny dashboard

The owner runs the project from the “Manage” screen on devany.ai. The menu runs from daily work to technical settings.

Logs

Staff view

Opens the app's team screens from the dashboard without an account, on the real records. Admin-only screens such as settings and revenue need an Admin sign-in in the app.

Data

The app's records (orders, bookings, ratings...) are listed here; records can be added, edited and deleted.

Users

People who signed up in the app. Give each one Member, Staff or Admin; staff access is granted only here.

Advanced

Download the code as a ZIP, push to GitHub, version history and error logs. Collapsed by default.

Back-office access, data and alerts

The demo's Customer/Business switch exists only in the showcase. In your copy the back office is private and opens with a staff sign-in.

How to get in

1. Publish the app (the copy arrives as a draft)
2. Open the app, tap the staff/team sign-in link at the bottom and create an account
3. DevAny → Manage → **Users**: give yourself **Admin** and employees **Staff**
4. Sign in again in the app; the back office opens

There is no PIN and no automatic owner access.

Data and alerts

Customer records are stored in DevAny and shown in the back office and under Data. Lists closed to visitors: **appointments pets**

Every new record in these lists creates a dashboard alert and, while the app is live, a free email to you.

Email and AI

Emails to customers (confirmations, reminders) go out when the app's email is on and the app is live; each uses a small amount of AI credit.

Photo pre-assessment for staff; not a diagnosis. Runs for real when clicked and uses AI credit; in the demo the results are pre-made.

AFTER YOU COPY

Go-live checklist

The steps shown in the dashboard after copying. Price, text and image edits go live instantly and spend no credit.

1. Open the published app, use Clinic sign-in at the bottom to create your account, then give yourself the Admin role in the DevAny dashboard under Users. Give your vets and nurses the Staff role.
2. In Settings, enter your vets, services, prices, currency and opening hours.
3. Replace the clinic photos with your own.
4. Turn on email for this app in the DevAny dashboard so owners get confirmations, photo updates and vaccine reminders.
5. AI photo pre-assessments use your AI credits per request; switch them off in Settings if you don't want them.
6. Explore the sample patients and appointments, then press Clear sample data before you open for real.

This app takes no online payments (customers pay at the venue and staff mark "Paid"), sends no real SMS (WhatsApp only opens a link) and does not sync with POS, hotel/clinic software, calendars or review sites.

Copy this app to your account

“Copy to my account” on the showcase page brings the project into your account as a draft, with your business name, city and contact details.

How it works

1. Open [devany.ai/showcase/apps/petcare](#)
2. Enter your business name, city, phone, WhatsApp and email
3. The project is created as a draft; clear the sample records in one tap from the dashboard
4. Edit texts, prices and images for your business, then publish

Copying uses no AI and spends no credit.

Plan to publish

PLAN	LIVE PROJECTS	DOMAIN
Free	No publishing, preview	—
Builder · \$29/mo	1	Included
Pro · \$79/mo	3	Included
Studio · \$199/mo	10	Included + white label

Copying is available on paid plans. Every paid plan includes monthly AI credit equal to its price.

Sandpaw Veterinary Clinic is a fictional business: phone and address are demo placeholders, images are illustrative, and submissions do not reach a real business.
