

Auria Dubai StayFlow

Customer screen, back office and DevAny dashboard

Direct bookings and room tracking for a boutique hotel: guests book on a live availability calendar and ask for anything mid-stay, while the owner runs the front desk from a tape chart.

demo-stayflow.devany.app

What was built?

Boutique hotel · Dubai Creek Harbour, UAE. One DevAny app with two faces: the screen on the customer's phone and the business's back office.

Highlights

- Live availability calendar with real per-room inventory, sold-out nights and room assignment
- Front-desk tape chart, arrivals and departures, check-in/out and housekeeping status
- Concierge requests and guest messaging, with AI reply drafts (demo)
- Occupancy, ADR and RevPAR dashboard, booking channels, booking QR and .ics files

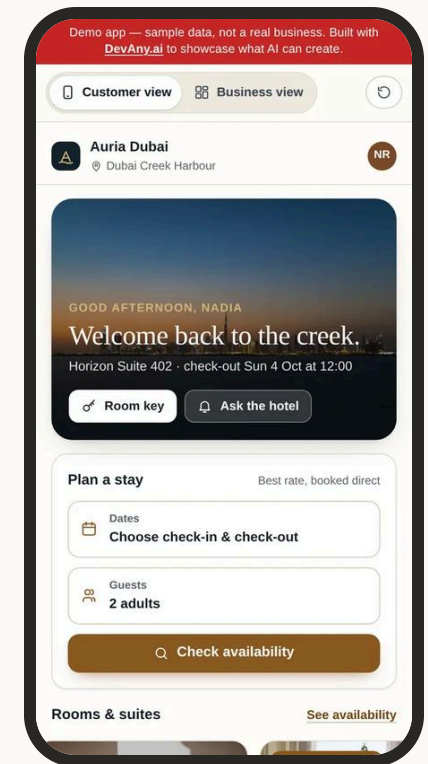

The demo and your copy

- The demo runs entirely in the browser: sample data is generated on the page, nothing is saved, and no AI or email is called.
- Your copy is a real DevAny app: records are stored and the back office opens with a staff sign-in.
- Customers use it from a link or QR code, with no account.

What the customer sees

Customers open the app from a link or QR code; no install or account needed.

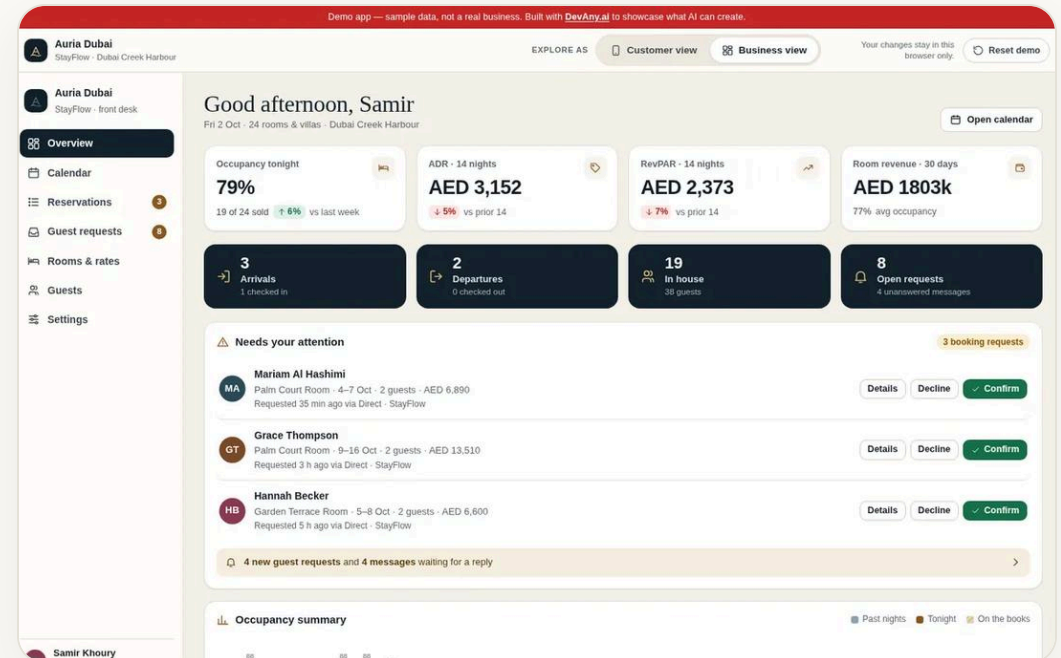

- Book in 4 steps on a 2-month availability calendar with nightly rates
- 6 room types showing Last one left or Sold out for these dates
- Extras: breakfast, DXB transfer, late check-out; pay at hotel
- Booking QR, room-key QR and .ics download in Trips
- Concierge requests with live progress and a chat with the front desk

What the business manages

The business view inside the app is where the owner and team work day to day.

- Tape chart of all 24 units across 14 nights, grouped by room type
- Needs your attention: booking requests with Confirm / Decline
- Occupancy, ADR and RevPAR KPIs, arrivals, departures, housekeeping
- Guest requests kanban and messages with AI reply drafts (demo)
- Rates, on-sale toggles and out-of-order units update the guest app

TRY IT IN THE LIVE DEMO

See both screens work together

In the demo, the switch in the top bar moves between the customer and business views.

Try this

1. In Customer view, book a Horizon Suite for 2 nights and send the request
2. Switch to Business view: it's under Needs your attention; click Confirm
3. Switch back: Trips shows the stay as Confirmed

Demo address

`demo-stayflow.devany.app`

What you try in the demo is not saved; it resets when the page reloads.

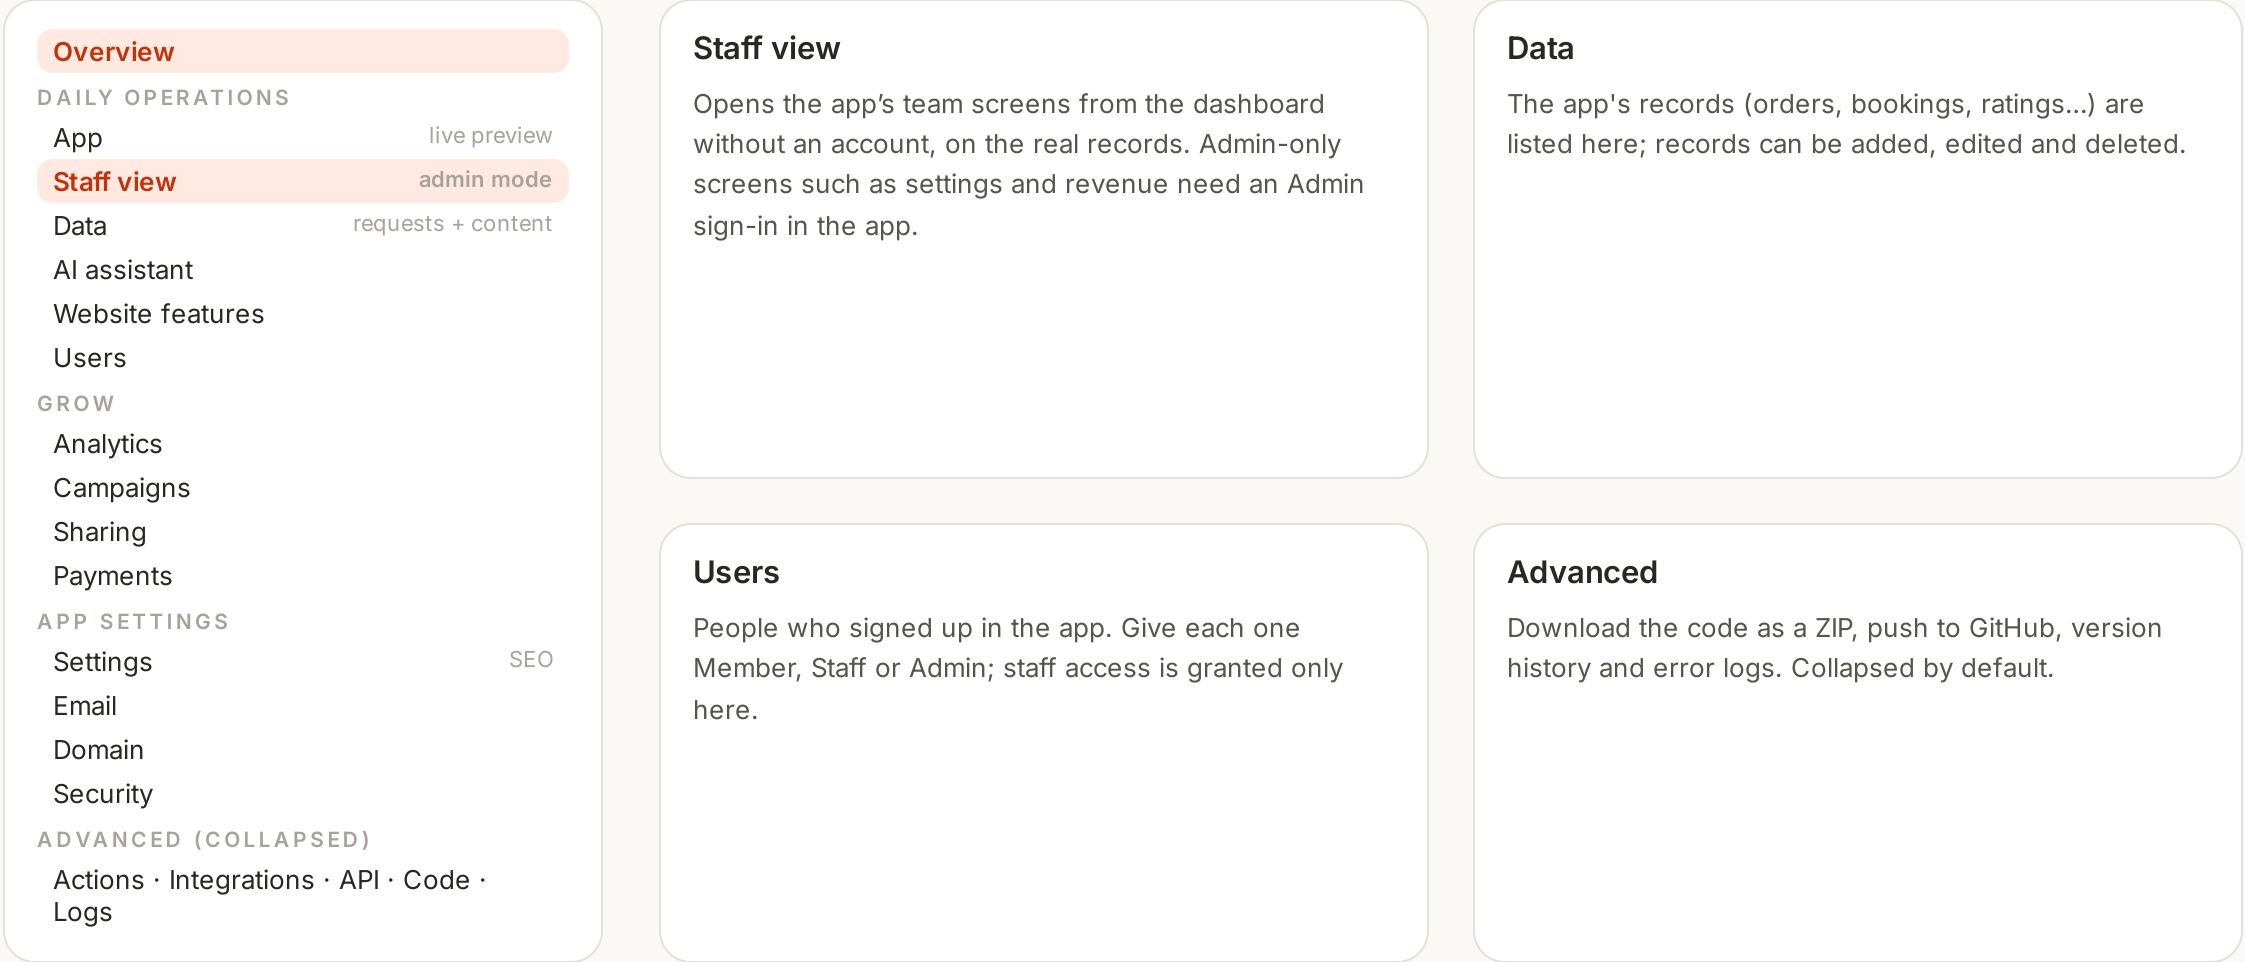

The brand's website

Auria Dubai — Waterfront hotel

`auria-dubai.devany.app`

Map of the DevAny dashboard

The owner runs the project from the “Manage” screen on devany.ai. The menu runs from daily work to technical settings.

Back-office access, data and alerts

The demo's Customer/Business switch exists only in the showcase. In your copy the back office is private and opens with a staff sign-in.

How to get in

1. Publish the app (the copy arrives as a draft)
2. Open the app, tap the staff/team sign-in link at the bottom and create an account
3. DevAny → Manage → **Users**: give yourself **Admin** and employees **Staff**
4. Sign in again in the app; the back office opens

There is no PIN and no automatic owner access.

Data and alerts

Customer records are stored in DevAny and shown in the back office and under Data. Lists closed to visitors: **reservations requests messages**

Every new record in these lists creates a dashboard alert and, while the app is live, a free email to you.

Email and AI

Emails to customers (confirmations, reminders) go out when the app's email is on and the app is live; each uses a small amount of AI credit.

Front-desk reply drafts. Runs for real when clicked and uses AI credit; in the demo the results are pre-made.

AFTER YOU COPY

Go-live checklist

The steps shown in the dashboard after copying. Price, text and image edits go live instantly and spend no credit.

1. Publish the app, open it, press "Staff sign-in" at the bottom and create your account. Then give yourself the Admin role in the DevAny dashboard under Users, and give your front-desk team the Staff role.
2. Replace the room types, units, photos and rates with your own in the dashboard under Data (room_types, units), and edit extras and their prices (extras).
3. In the staff panel > Settings, pick your currency, check-in and check-out times, weekend pricing and cancellation window.
4. Edit the "During your stay" tiles (highlights) so they show what your hotel really offers.
5. Explore with the sample reservations, then press "Clear sample data" on the Overview before you open for real.
6. Guest emails and AI reply drafts are on: check that email and in-app AI are enabled for the app in the dashboard. AI drafts use your own credits.

This app takes no online payments (customers pay at the venue and staff mark "Paid"), sends no real SMS (WhatsApp only opens a link) and does not sync with POS, hotel/clinic software, calendars or review sites.

Copy this app to your account

"Copy to my account" on the showcase page brings the project into your account as a draft, with your business name, city and contact details.

How it works

1. Open [devany.ai/showcase/apps/stayflow](#)
2. Enter your business name, city, phone, WhatsApp and email
3. The project is created as a draft; clear the sample records in one tap from the dashboard
4. Edit texts, prices and images for your business, then publish

Copying uses no AI and spends no credit.

Plan to publish

PLAN	LIVE PROJECTS	DOMAIN
Free	No publishing, preview	—
Builder · \$29/mo	1	Included
Pro · \$79/mo	3	Included
Studio · \$199/mo	10	Included + white label

Copying is available on paid plans. Every paid plan includes monthly AI credit equal to its price.

Auria Dubai is a fictional business: phone and address are demo placeholders, images are illustrative, and submissions do not reach a real business.
